

Individual Assignment – Issue Tracking System

Software Engineering Team

Objective

Develop a web-based Issue Tracking System that allows users to create, manage, and track software issues. This assignment is designed to evaluate your understanding of frontend development, backend/API development, database handling, authentication, Git workflow, and problem-solving skills.

Required Features

- User registration and login functionality.
- Create issues with title, description, issue type (Bug or Task), priority, status, assignee, and due date.
- Display all issues in a clear and organized interface.
- View detailed information of a selected issue.
- Edit and delete existing issues.
- Update issue status (Open, In Progress, Resolved, Closed).
- Search issues by title or description.
- Filter issues by status, priority, and issue type.
- Add comments to issues and display comment history.
- Maintain activity history for important changes (example: status updates).
- Create a dashboard showing issue summaries such as total issues, open issues, completed issues, and high-priority issues.
- Implement proper input validation and error handling.
- Create a responsive and user-friendly interface.

Optional Features

- File attachment support for issue screenshots/documents.
- Pagination for issue listing.
- Additional UI improvements and user experience enhancements.

Technical Expectations

- Use a frontend framework/library such as React or Next.js.
- Develop backend APIs using suitable technologies (Node.js and Express.js recommended).
- Use MongoDB/Mongoose or another suitable database.
- Implement a clean project structure.
- Use Git properly and create a separate branch for the assignment.
- Follow proper coding practices and maintain readable code.

Expected Deliverables

- Working Issue Tracking System.
- Source code pushed to your separate Git branch.
- README file including setup instructions, technologies used, and project explanation.
- Screenshots of the completed application.

- Short project demo video (3–5 minutes).
- Submission document containing your name, GitHub repository link, Git branch name, and demo video link.

Submission Method

1. Create a document (PDF or Word) containing:

- Your Name
- GitHub Repository Link
- Git Branch Name
- Project Demo Video Link

2. Upload the document to the following Google Drive folder:

https://drive.google.com/drive/folders/1nGVMhKKyc3aSG8-g3NJKCm1_x0l2Ae7o?usp=sharing

3. Upload your project demo video to the same Google Drive folder.

Deadline

17/08/26 Monday – 3:00 PM

Important Notes

- This is an individual assignment. Each member should submit their own implementation.
- You may use documentation and learning resources while completing the assignment.
- You should be able to explain your implementation during the review.
- If you face difficulties, try to solve them independently before requesting support.

Good luck!
